1. About this manual

Petrol Pump ERP runs a petrol pump from one Windows PC: staff, fuel prices, tanks and nozzles, shifts, sales, credit customers, expenses, purchases from suppliers, cash and fuel reconciliation, reports and backups. It works entirely offline. Your data stays on the computer it is installed on.

This manual explains the application screen by screen. You do not need any technical knowledge. Read chapters 2 to 4 first, then jump to the screens that apply to your job.

Who should read what

If you are...	Read these chapters
Setting the system up for the first time	2 Installation, 5 First-day setup, 6 Masters, 11 Backups
An attendant at the counter	3 Getting around, 7 Terminal, 7 My Shift, 13 Daily routine
A shift supervisor	7 Shifts, Attendance, Reconciliation, 13 Daily routine
A manager or owner	Everything - especially 7 Operations, 8 Reports, 12 Alerts
An accountant	7 Credit, Expenses, Reconciliation, 8 Reports
The administrator	2 Installation, 6 Users, 11 Backups & Audit Log, 14 Security

The pictures in this manual

Every screenshot was taken from the real application filled with **demo data** (about ten weeks of made-up shifts, sales and customers). The names, amounts and alerts you see in the pictures are not real. Your own screens will show your own data, and a brand-new installation starts almost empty.

Words used in this manual

Word	Meaning
Click	Press the left mouse button on a button or item.
Tile	A card on a menu page that opens one screen (for example 'Employees').
Shift	A working period at the pump (for example 'Morning' on one date).
Nozzle	One fuel gun on a dispenser. Each dispenser has exactly two nozzles.
Reconciliation	Comparing what the system expected (cash, UPI, card, fuel) with what was actually counted.
Void / Reverse / Adjust	How mistakes are corrected. Records are never deleted - see chapter 4.

2. Installing and signing in

Option A - the installer (recommended, Windows)

1. On any computer with internet, open <https://github.com/Rahil-Mokashi/initial-capstone/releases> and open the newest release at the top.
2. Under **Assets**, download **PetrolPumpERP-Setup-1.0.0.exe** (the installer). If you prefer not to install, download **PetrolPumpERP.exe** instead - it is one portable file you can double-click.
3. Copy the file to the pump PC (a USB stick is fine - the pump PC itself never needs internet).
4. Double-click the file. The installer needs no administrator rights. Click through the prompts. It adds a Start Menu shortcut for the app and for this documentation.
5. Open **Petrol Pump ERP** from the Start Menu.

Important: If Windows shows a blue 'Windows protected your PC' screen, click **More info**, then **Run anyway**. This appears because the program is new and not yet signed with a paid publisher certificate. It does not mean the file is damaged.

Option B - run from source (technical users, any OS)

Install **Python 3.13+** (on Windows tick 'Add python.exe to PATH') and **Git**, then in a terminal:

```
git clone https://github.com/Rahil-Mokashi/initial-capstone.git
cd initial-capstone
python -m venv venv
venv\Scripts\activate (macOS/Linux: source venv/bin/activate)
pip install -r requirements.txt
python -m app.main
```

Optional: **python scripts/seed_demo_data.py** loads ten weeks of demo data so you can explore every report. Never run it on a pump's real database.

This device: COUNTER-PC

Welcome back

Username
admin

Enter your username

Password Use PIN instead
Your password Show

Sign In →

Can't sign in? Ask the person who manages this computer for help.

Forgot password?

The login screen

1. Type the username **admin** and the password **Admin@123**.
2. The app immediately asks you to choose a **new password**. This cannot be skipped, because the default password is publicly known. Use at least 8 characters with an uppercase letter, a lowercase letter and a digit.
3. **Write the new password down and keep it somewhere safe.** Only another administrator account can reset it.
4. Open **Masters -> Users** and create a personal account for every person who needs one. Stop using the shared 'admin' login for daily work, so the audit trail shows who really did what.

Login screen extras

- **Wrong password 5 times** locks the account. It unlocks itself after 15 minutes, or an administrator can unlock it straight away (Users screen).
- **Forgot password:** use the forgot-password link on the login screen. An administrator can generate a one-time reset code for you (Users screen -> Generate Password Reset Code).
- **PIN sign-in** (optional): counter staff can set a short PIN from the sidebar (Change Password area) for quick sign-in and for unlocking the screen.
- **Windows Hello** (optional, needs an extra component): fingerprint/face unlock of the lock screen.
- A **Caps Lock** warning appears while typing the password; a language toggle switches English / regional.
- Sessions end automatically after inactivity (8 hours by default). Nothing in progress is lost - sales are saved as you go.

Where your data lives

Everything is stored on the PC, per Windows user, in **%LOCALAPPDATA%\PetrolPumpERP**:

Item	What it is
petrol_pump.db	The database - every sale, employee, shift and balance.
backups\	Database backups (automatic and manual).
reports\	Default folder for exported PDFs, Excel files and receipts.
petrol_pump_erp.log	A plain-text log used to diagnose problems.
config.env	Optional settings file (see Appendix A).

Uninstalling the program never deletes this folder. To move to a new PC, copy a backup file across and restore it (chapter 11).

Installing on several computers

Each PC is completely independent: it has its own database. There is no network sync by design. If two counters must share one set of records, use one PC as the pump's main computer. Repeat the steps above on every PC where the app should run, and set each up separately.

3. Getting around the app

Dashboard after sign-in

The window layout

Area	What it shows or does
Sidebar (left)	Four groups - Masters, Operations, Reports, Settings - plus Dashboard. At the bottom: Support, Change Password, Lock, Logout . A group only appears if your role can open something inside it.
Search box (top)	Searches employees, nozzles, tanks and (for administrators) user accounts. Press Ctrl+F to jump into it. You only ever find records your role may see.
Offline badge	Green 'Offline - Local Only' - a reminder that the app never uses the internet.
Shift indicator	Shows whether a shift is open on this pump right now, and which one.
Clock	Date and time of the PC.
Alerts button	A count of things needing attention. Click it for the list. See chapter 12.
Your name menu	Your account: change password, set PIN, lock, sign out.
Alert strip	A coloured banner under the top bar, visible on every screen, summarising the most urgent alert. Click it to open the exact screen the alert is about.
Back button & trail	Under the strip: Back returns one level; the trail shows where you are.

Keyboard shortcuts

Keys	Action
Ctrl+F	Jump to the search box
F5	Refresh the screen you are on
Esc	Go back one level

The four menus

Clicking **Masters**, **Operations**, **Reports** or **Settings** opens a menu page of tiles, grouped under headings, each with a one-line description. Click a tile to open that screen.

Masters menu - the 'set up once, change rarely' information

The dashboard

The dashboard is a live snapshot of the pump: **sales today, revenue today, shifts open now, tanks running low, purchase orders pending**, then **Live tank levels** (a gauge per tank), a sales chart, who is on shift, and an **Attention needed** list. Every figure is shown only if your role is allowed to see it.

What a restricted role sees

An attendant, for example, sees a much smaller menu - their own shift, the sales terminal, and little else.

Dashboard as an attendant

Tip: If a screen or button you expect is missing, it is a permission setting, not a fault. Ask your administrator rather than trying to work around it.

Page 11

4. Roles, permissions and the golden rules

Roles

Role	Typical person	In one line
Admin	System administrator	Everything, including users and configuration
Owner	Pump owner	Everything, same practical scope as Admin
Manager	Pump manager	Runs operations: staff, procurement, expenses, reports, approvals
Accountant	Accounts clerk	Payments, credit, expenses, financial reports
Shift Supervisor	Shift in-charge	Opens/closes shifts, assigns nozzles, reconciliation
Attendant	Pump attendant	Records sales on their own nozzle; sees their own shift

Who can open which screen

This table is generated from the application's own permission settings, so it is exactly what the app enforces. 'Yes' means the role can open that screen.

Screen	Admin	Owner	Manager	Accountant	Supervisor	Attendant
Employees	Yes	Yes	Yes	Yes	Yes	-
Users	Yes	Yes	-	-	-	-
Fuel Prices	Yes	Yes	Yes	Yes	Yes	Yes
Tanks	Yes	Yes	Yes	Yes	Yes	-

Screen	Admin	Owner	Manager	Accountant	Supervisor	Attendant
Reports: Attendance	Yes	Yes	Yes	Yes	Yes	-
Reports: Business Insights	Yes	Yes	Yes	Yes	-	-
Backups	Yes	Yes	-	-	-	-
Audit Log	Yes	Yes	Yes	Yes	-	-

The golden rules

Rule: Nothing is ever deleted or silently overwritten. Mistakes are fixed with a visible correcting action - void, cancel, reverse, adjust or reject - and almost always require a written **reason**. The original, the correction and the reason all stay on record.

Rule: Never fix a number by re-entering data. Re-entering creates a duplicate and makes the books untrustworthy. Use the correction action on the original record (for example Cancel Selected on a sale).

Rule: A variance is not an accusation. Differences between expected and counted money or fuel are recorded and graded (Normal, Warning, Investigation Required, Approval Required). Small ones are normal.

Rule: Every important action is audited: who, what, when, and the old and new values. The Audit Log screen shows them and cannot be edited.

Rule: Prices are locked at the moment of sale. Changing a fuel's price later never changes a sale already made.

Rule: Closed means closed. A closed shift or a decided request (approved/rejected) is final. Reopening a shift needs a stricter permission and a reason.

5. First-day setup checklist

Do these in order. Several steps are blocked until an earlier one is done - this is deliberate: the system refuses to record data it knows is wrong. Allow about an hour.

1. **Sign in and change the admin password** (chapter 2).
2. **Company Profile** (Masters -> System): enter the company name, address and GSTIN. They are printed on receipts and reports.
3. **Fuel Prices**: set a real selling rate for Petrol, Diesel and Power. They start at 0.00 and the app **refuses to record any sale** of an unpriced fuel.
4. **Tanks**: create each tank with its fuel type, capacity and the **real current stock** (dip the tank and enter the measured figure). Every future reconciliation measures against this opening number.
5. **Nozzles & Dispensers**: add each dispenser, then its two nozzles. If a fuel has more than one tank, choose which tank each nozzle draws from.
6. **Employees**: add everyone working at the pump.
7. **Users**: create a login for each person who needs one, with their role. Never share logins.
8. **Credit customers** (Operations -> Sales -> Customers, then Operations -> Credit): create the customer, then open a credit account with a limit and payment terms. Both steps are required before credit sales are possible. Record any amount a customer already owes as an opening credit sale.
9. **Suppliers**: add your fuel suppliers.
10. **Backups**: take a manual backup, then use **Copy to USB / Network** to put a copy off the machine.

Important: Do not skip the fuel prices. If sales are refused with a price message, this is the reason.

6. Masters - the set-up information

Masters holds information you set up once and change rarely. Open it from the sidebar.

Employees

Staff records. An employee record is separate from a login account: you can keep HR records for people who never sign in. Codes are generated automatically (EMP-0001, EMP-0002 ...).

Employees screen (sample demo data)

Who can open it: Roles with Employee View permission (Admin, Owner, Manager and others - see the table in chapter 4).

What's on the screen

Control	What it does
Search box	Find by name or employee code.
+ Add Employee	Opens the new-employee form.
Status drop-down (in each row)	Change an employee between active, on leave, suspended or terminated. A reason is mandatory and the change is audited.
Pencil icon (end of row)	Opens the employee's detail: profile, documents, and recording an exit.

How to do the common tasks

Add an employee

1. Click **+ Add Employee**.
2. Fill in name, designation, department, joining date and contact details.
3. Click **Save**.

Attach documents (ID proof etc.)

1. Open the employee with the pencil icon.

2. Click **Add Document**, fill in the details.
3. To remove one, select it and click **Remove Selected** (it is hidden, not erased).

Record someone leaving

1. Open the employee, click **Record Exit**, enter the exit date and reason. The record stays forever.

Rule: An employee is never deleted. Only the status changes, and every change is logged.

Users

Login accounts. Several users can share one role (for example four attendants).

Users screen (sample demo data)

Who can open it: Admin and Owner only.

What's on the screen

Control	What it does
+ Add User	Create a login: username, name, role and a temporary password.
Change Role	Move a user to a different role (reason required).
Reset Password	Set a new temporary password. The user must change it at next sign-in.
Unlock Account	Clear a lockout straight away instead of waiting 15 minutes.
Generate Password Reset Code	Creates a one-time code a user can use on the login screen's forgot-password flow.
Activate / deactivate	Switch an account off without deleting it (reason required).

How to do the common tasks

Create a login

1. Click **+ Add User**.
2. Enter the details and choose the role.

- Set a temporary password that meets the policy (8+ characters, upper, lower, digit).
- Click **Save** and tell the person their temporary password.

Rule: Accounts are never deleted. Deactivate instead - the history keeps pointing to the right person.

Fuel Prices

The selling rate of each fuel. Prices are versioned: every change records who made it and when.

Petrol Pump ERP
COUNTER-PC

Search employees, nozzles, tanks... Offline — Local Only Shift: — Thu, 08 Oct · 06:02:43 PM Alerts (40) AU Admin

40 alerts need attention — most urgent: No backup has ever been taken. Show all 39

[← Back](#) Fuel Prices

Fuel Prices

The rate each fuel currently sells at. A sale snapshots the rate at the moment it is recorded, so changing a price here never alters a past sale.

[Refresh](#) [Price History](#)

Fuel	Rate per litre	Status
Petrol	₹102.50	Priced
Diesel	₹94.20	Priced
Power	₹110.00	Priced

Support
Change Password
Lock
Logout

Fuel Prices screen (sample demo data)

Who can open it: Roles with Fuel Price View; setting prices needs the matching manage permission.

What's on the screen

Control	What it does
Pencil icon (end of row)	Set or change that fuel's price.
Price History	Every past price for that fuel, newest first.
Refresh	Reload the page.

Tip: You can change a price in the middle of a shift (for example when the depot price moves). Sales made earlier keep the price they were sold at.

Tanks

Underground storage tanks and their stock. A pump may have several tanks per fuel. Stock changes only through recorded transactions.

Tanks screen (sample demo data)

Who can open it: Roles with Inventory View.

What's on the screen

Control	What it does
+ Add Tank	Register a tank: code, fuel, capacity, opening stock.
Change Status	Mark a tank active, inactive, etc. (reason required).
Record Reading	Save a dipstick measurement. A reading is an observation - it does not change the book stock by itself.
Receipt / Issue / Adjustment	Record fuel arriving, leaving, or a correction (an adjustment always needs a reason).
Reconcile	Compare expected closing stock (opening + received - sold) with the physical reading.
Tabs: Readings, Transactions, Reconciliation	The history of each.

Rule: The system rejects stock above capacity, below zero, or an adjustment with no reason.

Tip: Fuel reconciliation grades the difference: Normal, Warning, Investigation Required, Approval Required. It never assumes theft; an accepted reconciliation becomes the new baseline.

Nozzles & Dispensers

The physical pumps. Each dispenser has exactly two nozzles, and each nozzle sells one fuel.

Nozzles & Dispensers screen (sample demo data)

Who can open it: Roles with Nozzle View.

What's on the screen

Control	What it does
+ Add Dispenser	Register a dispenser.
+ Add Nozzle	Add a nozzle to an active dispenser and choose its fuel and tank.
Tabs: Dispensers / Nozzles	Switch between the two lists.
Status change	Active, inactive or maintenance (reason required).

Rule: A third nozzle on one dispenser is refused. A nozzle currently assigned in an open shift cannot be deactivated.

Suppliers

Fuel suppliers you buy from, and what has been ordered from each.

Suppliers screen (sample demo data)

Who can open it: Roles with Procurement View.

What's on the screen

Control	What it does
+ Add Supplier	Create a supplier (name, contact, address).
Deactivate	Retire a supplier without deleting history.

Company Profile

The business name, address and GSTIN printed on receipts and reports.

Company Profile screen (sample demo data)

Who can open it: Roles with Settings View.

What's on the screen

Control	What it does
Fields	Company name, address, GSTIN and the default folder for exports.
Browse...	Choose a folder.
Save Settings / Discard Changes	Keep or throw away your edits.

7. Operations - the daily work

Terminal (fast sale entry)

The quick screen used at the counter during a live shift: pick the nozzle, enter an amount or litres, choose how the customer pays.

The screenshot shows the 'Terminal' screen of the Petrol Pump ERP system. The interface includes a sidebar with navigation options: Dashboard, Masters, Operations, Reports, Settings, Support, Change Password, Lock, and Logout. The main area displays a 'Terminal' screen with the following elements:

- Header:** Search bar for employees, nozzles, tanks...; Status: Offline — Local Only; Shift: —; Date/Time: Thu, 08 Oct - 06:02:49 PM; Alerts (40); User: Admin.
- Alerts:** 40 alerts need attention — most urgent: No backup has ever been taken. (Show all 39)
- Terminal Section:**
 - Shift:** 2026-10-08 Morning
 - Attendant:** EMP-1001 - Anita Sharma
 - Nozzle:** N1 Petrol (selected), N2 Diesel, N3 Petrol, N4 Diesel, N5 Power, N6 Petrol.
 - Amount:** ₹ Amount (selected), Liters. Quick amounts: ₹200, ₹500, ₹1000, ₹2000.
 - Volume and Total:** Volume: 4.88 L, Total: ₹500.00
 - Payment Method:** Cash (selected), Upi, Card, Credit.

Terminal (fast sale entry) screen (sample demo data)

Who can open it: Roles allowed to record sales (Attendant, Supervisor, Manager, Admin, Owner).

What's on the screen

Control	What it does
Shift	The open shift. You can only sell during an open shift.
Attendant	Who is serving. Attendants see only their own assignment, filled in automatically.
Nozzle buttons	Tap the nozzle the fuel came from (N1 Petrol, N2 Diesel ...).
Amount / Liters	Switch between entering money or litres. The other is calculated for you.
Quick amounts	One-tap amounts (200, 500, 1000, 2000).
Volume and Total	Live preview of litres and money at today's price.
Payment method	Cash, UPI, Card or Credit.

How to do the common tasks

Record a cash sale

1. Check the shift and attendant at the top.
2. Tap the nozzle.
3. Tap a quick amount or type an amount.
4. Choose **Cash**.
5. Confirm to record the sale.

UPI or card

1. Choose **UPI** or **Card**.
2. Fill in the UPI reference or card authorisation code - this makes reconciliation much easier.

Credit sale

1. Choose **Credit**, then select the customer.
2. The sale is refused if the customer has no credit account or it would exceed the limit.

Rule: A sale cannot be recorded until the fuel has a price and you are assigned to a nozzle in an open shift.

Sales

Look up past sales, manage customers, print receipts, and correct mistakes.

The screenshot shows the 'Sales' screen in the Petrol Pump ERP system. The top navigation bar includes a search bar, status indicators (Offline, Local Only), shift information, date/time, alerts (40), and user profile (Admin). A sidebar on the left lists navigation options: Dashboard, Masters, Operations, Reports, Settings, Support, Change Password, Lock, and Logout. The main content area displays '40 alerts need attention' and a 'Sales' section with three fuel type summary cards: DIESEL (₹4,440.59, 47.14 L today), PETROL (₹16,865.35, 164.54 L today), and POWER (₹1,262.80, 11.48 L today). Below these are tabs for 'Sales' and 'Customers'. The 'Sales' tab is active, showing buttons for 'Export Receipt PDF', 'Print Receipt', 'Refund Payment', 'Mark Payment Failed', 'Cancel Selected', and '+ Record Sale'. A table lists recent sales with columns: Receipt #, When, Fuel, Quantity, Amount, Method, Sale Status, and Payment Status. The table shows several demo transactions with 'Completed' status and 'Success' payment status. Navigation buttons '< Previous' and 'Next >' are at the bottom of the table, along with 'Showing 1-50 of 447'.

Sales screen (sample demo data)

Who can open it: Roles with Sale View.

What's on the screen

Control	What it does
Tabs: Sales / Customers	Sales list or the customer records.
+ Record Sale	Full sale form (managers/supervisors pick shift, nozzle and employee).
Previous / Next	Page through older sales.
Print Receipt / Export Receipt PDF	A printable receipt for the selected sale.
Cancel Selected	Cancels a completed sale: needs a reason, returns fuel to the tank and reverses the payment. The original stays on record.
Mark Payment Failed / Refund Payment	After-the-fact payment corrections (reason required).
+ Add Customer	Create a customer (name, contact, address).

Rule: Never delete or retype a wrong sale. Cancel it with a reason.

Shifts

A shift is one working period, for example 'Morning' on one date. There can be only one shift per date and label.

Petrol Pump ERP

Shifts screen (sample demo data)

Who can open it: Roles with Shift View; opening/closing needs the shift-manage permission.

What's on the screen

Control	What it does
+ Open Shift	Start a new shift (date and label).
Open (row)	View a shift, its assigned nozzles and attendants.
Assign Nozzle	Assign an attendant to a nozzle with the opening meter reading.
Close Shift	End the shift once every nozzle assignment is completed.
Reopen Shift	Controlled correction: needs a reason and a stricter permission.

How to do the common tasks

Run a shift

1. A supervisor clicks **+ Open Shift**.
2. For each attendant: **Assign Nozzle**, choose the person and nozzle, enter the **opening meter reading** from the dispenser.
3. At the end enter each **closing meter reading** (it must be at least the opening reading) to complete the assignment.
4. Click **Close Shift**.
5. Then run **Reconciliation**.

Rule: The same employee cannot be assigned twice, and the same nozzle cannot go to two people in one shift. A shift cannot be closed while any assignment is still active.

My Shift

A self-service page for attendants showing their own current nozzle, fuel, dispenser and opening meter reading.

My Shift screen (sample demo data)

Who can open it: Attendants (and anyone with the My Assignment permission).

What's on the screen

Control	What it does
Assignment details	Read-only. If it says no assignment, ask your supervisor to assign you.

Attendance

A daily roster of who was present, absent, late, half-day, on leave or on holiday.

Leave screen (sample demo data)

Who can open it: Roles with Leave View; approving is a stricter, Manager-level permission.

What's on the screen

Control	What it does
+ Request Leave	Create a request for an employee and date range.
Approve Selected / Reject Selected	Decide a pending request.
Cancel Selected	Withdraw a pending request.

Rule: Approving leave automatically marks the employee's attendance as 'leave' for those dates. Approved, rejected and cancelled requests are final. A person who submitted a request cannot also approve it unless their role allows both.

Credit

Credit accounts for regular customers who buy now and pay later.

Credit screen (sample demo data)

Who can open it: Roles with Credit View.

What's on the screen

Control	What it does
+ Open Credit Account	Give a customer a credit limit and payment-due days.
Change Limit	Raise or lower the limit.
Record Payment	Record money received from the customer.
View Statement	Every credit sale and payment with a running balance - printable, PDF and Excel.
Overdue column	Yes when the oldest unpaid sale is older than the due days.

Rule: The balance is always calculated (credit sales minus payments), never typed. A sale that would exceed the limit is refused, not just warned. Customer payments are never edited - a correction is a new record.

Expenses

Pump running costs, with an approval step.

2026-08-09	Maintenance	3200.00	Cash	Meena Patel	Approved

Expenses screen (sample demo data)

Who can open it: Roles with Expense View; approving is a stricter permission (not given to Accountants).

What's on the screen

Control	What it does
Tabs: Expenses / Categories	The expense list or the category list.
+ Add Category	Create a category such as Electricity or Repairs.
+ Record Expense	Amount, date, employee, optional shift, payment method (cash/UPI/card), receipt reference and description.
Approve Selected / Reject Selected	Decide a pending expense. Rejecting needs a reason.

Rule: Once approved or rejected an expense is never edited or deleted. Only approved expenses count in reconciliation.

Reconciliation

Per-shift check of cash, UPI and card against what the system expected, plus cash custody and staff shortages.

Reconciliation screen (sample demo data)

Who can open it: Roles with Reconciliation View; supervisors may reconcile, but only Manager and above approve high-variance results.

What's on the screen

Control	What it does
+ Reconcile Shift	Enter what you actually counted (cash) and read (UPI, card) for a shift.
Approve Selected	A manager approves a flagged reconciliation.
Variance by Tender	Difference for Cash, Card and Other. Classification shows how serious it is.
Shift Cash Custody	Record bank deposits and cash movements (advance/final) for the shift.
Employee Cash Shortages	Book a named employee's shortage as a receivable and record recoveries (Manager and above).

How to do the common tasks

Reconcile a shift

1. Close the shift first.
2. Click + **Reconcile Shift**.
3. Enter the counted cash and the UPI and card totals.
4. Save. The system compares them with its expected totals.
5. If flagged for approval, a manager reviews and clicks **Approve Selected**.

Rule: A shift is reconciled only once. Expected totals are calculated from recorded sales, payments and approved expenses - never typed.

Procurement screen (sample demo data)

Who can open it: Roles with Procurement View.

What's on the screen

Control	What it does
Tabs: Purchase Orders / Invoices (and suppliers)	The order list and the supplier invoices.
+ Create Purchase Order	Order fuel from a supplier (+ Add Item per fuel).
Record Delivery Arrival	A tanker has arrived.
Verify Documents / Verify Quality	Check the paperwork and the fuel quality.
Record Pre-Dip Reading	Measure the tank before unloading.
Record Post-Dip & Unload	Measure after unloading. Litres received = post-dip minus pre-dip, calculated for you.
Reject Delivery / Cancel Order	Refuse a bad delivery or cancel an order.
+ Record Invoice / Record Payment	Record the supplier's bill and pay it, fully or in part.

How to do the common tasks

Receive a tanker

1. Open the purchase order, click **Record Delivery Arrival**.
2. **Verify Documents**, then **Verify Quality**.
3. **Record Pre-Dip Reading** on the tank.
4. Unload, then **Record Post-Dip & Unload**.
5. The tank's stock updates automatically.
6. Later: + **Record Invoice** and **Record Payment**.

Rule: A payment cannot exceed the outstanding balance, and a fully paid invoice cannot be paid again.

8. Reports

Open **Reports** from the sidebar to see every report your role may open. Click a report's button to open it.

Business Insights (Performance & Forecast)

Performance tab: revenue, quantity and estimated profit per fuel for a day, week, month, quarter or year (profit uses weighted-average cost and shows N/A when there is no purchase history). Sales Forecast tab: next week's expected sales per fuel from recent trends, classified as likely hike, possible dip or stable, with the reasoning shown.

Profit figures use the weighted-average purchase cost for each fuel type as of the period end - "N/A" means no purchase history exists yet for that fuel.

Fuel Type	Revenue	Quantity (L)	Avg. Cost	Est. Cost of Goods	Est. Gross Profit	Margin %
Petrol	16065.35	164.54	95.82	15766.22	1099.13	6.5
Diesel	4440.59	47.14	87.83	4140.31	300.28	6.8
Power	1262.80	11.48	101.85	1169.24	93.56	7.4
Total Revenue	22568.74					
Total Est. Gross Profit	1492.97					
Total Approved Expenses	1483.00					
Est. Net Profit	9.97

9. Settings - Backups and Audit Log

Backups

Protects you against a dead disk, a bad update or a mistake. A backup is a complete copy of the database.

Backups screen (sample demo data)

Who can open it: Roles with the Backup Manage permission (Admin, Owner, Manager by default).

What's on the screen

Control	What it does
Back Up Now	Take a backup immediately.
Copy to USB / Network...	Copy a backup to a USB stick or network folder. Do this regularly - a backup on the same drive as the database does not survive a disk failure.
Check Integrity	Runs a full consistency check of the live database. Safe at any time; changes nothing.
Restore Selected	Replace the live database with a chosen backup (reason required).

Rule: Restoring first takes a safety backup of the current database, so even a wrong restore can be undone. Restart the app after a restore.

Tip: Backups are taken automatically before any database update and once a day. Every backup is verified right after it is made. A failed automatic backup never stops the app starting.

Audit Log

A read-only history of every recorded action: who did it, when, and what changed. It cannot be edited.

Audit Log screen (sample demo data)

Who can open it: Roles with the Audit View permission (Admin, Owner).

What's on the screen

Control	What it does
Filter	Narrow by event type, user and date range.
Verify Trail	Checks that the audit trail has not been tampered with outside the app.

Tip: Use it to answer 'who cancelled this sale?' or 'who changed that price?'

10. Alerts

The **Alerts** button in the top bar shows how many things need attention and turns amber or red when any do. Open it for the list. Each alert is one plain sentence saying **what** is wrong, **where** (real tank, customer, employee or shift name) and **what to do**. Click an alert to open the exact screen it concerns.

What raises an alert

- Low fuel in a tank, fuel or cash variances, payment mismatches
- Attendance not yet marked, items waiting for your approval
- Customers overdue, supplier invoices past their due date
- No recent backup, or a database or audit-trail problem

How alerts behave

- You only see alerts for areas your role can access. Approvals only reach people who can give them.
- **There is no dismiss button - deliberately.** An alert is recalculated from live data each time, and disappears by itself when the problem is fixed (refill the tank, approve the expense, record the payment).
- So an empty list genuinely means nothing is outstanding. If the app could not work the list out, it says so instead of showing an empty list.
- The count refreshes about once a minute; opening the screen refreshes immediately.

Important: Administrators: take special note of **Backup failure** (no backup in 48 hours), **Database error**, **The audit trail has been altered**, and a burst of **Refused actions** from one account. Treat the first three as urgent.

11. Backup and recovery

A simple backup habit

1. At the start and end of each day, open **Settings -> Backups** and click **Back Up Now**.
2. Click **Copy to USB / Network...** and copy it onto a USB stick kept somewhere safe (ideally away from the pump).
3. Keep the start-of-day backup until you are sure the day's data is sound.

Restoring a backup

1. Open **Backups** and select the backup you want.
2. Click **Restore Selected**.
3. Type the **reason** (it is audited).
4. Confirm. The app saves a safety copy of the current database first.
5. Close and reopen the app.

Important: A restore rolls back **everything** since that backup, not just one wrong entry. For an everyday mistake use the correction action in that module (cancel, reverse, adjust) instead.

If the app will not start

1. Open **%LOCALAPPDATA%\PetrolPumpERP\petrol_pump_erp.log** in Notepad and read the last lines.
2. If it points at a damaged database, **do not delete it**. Rename it to petrol_pump.db.broken.
3. Copy the newest file from the **backups** folder to **petrol_pump.db** and start the app again.
4. If nothing in backups works, keep the broken file and the log for investigation.

Power cut mid-sale

Restart the app and check the last sale on the Sales screen. The database is built to survive this - a transaction either completed or did not, never half. If unsure whether something saved, **look at the list screen rather than entering it again**.

12. Daily routine checklist

Before the shift

- Check the Alerts - especially low fuel and the backup alert.
- Confirm today's fuel prices are right (Masters -> Fuel Prices).
- Mark the previous day's attendance if it was missed.

Opening the shift (supervisor)

1. Operations -> Shifts -> + **Open Shift**.
2. **Assign Nozzle** for each attendant with the opening meter reading from the dispenser face.

During the shift

- Attendants record every sale in **Terminal**. Use the UPI reference / card code fields.
- Credit sales: choose the customer; the app checks their limit.
- Mistake? **Sales -> Cancel Selected** with a reason. Never re-enter.
- Deliveries: follow the Procurement steps.

Closing the shift

1. Enter each **closing meter reading** and complete the assignments.
2. **Close Shift**.
3. **Reconciliation -> + Reconcile Shift**: count the cash and enter UPI and card totals.
4. Manager approves any flagged variance.
5. Reports -> **Daily Summary**: compare with your own count.
6. Settings -> Backups -> **Back Up Now**, then **Copy to USB / Network....**

Weekly / monthly

- Approve pending expenses and leave requests.
- Record customer payments; review Customer Outstanding.
- Record supplier invoices and payments.
- Review Fuel Movement for unusual adjustments.
- Skim the Audit Log for refused actions.

13. Security and data protection

What the app protects

- Passwords are never stored - only salted, iterated hashes.
- Sign-in sessions are stored hashed, so a stolen database yields no usable sessions.
- The audit trail is append-only and hash-chained, so tampering is detectable.
- Every important action needs a permission, and many need a written reason.
- The app never uses the internet and sends nothing anywhere.

What YOU must do

The database file is not encrypted. Anyone who can copy the file can read every sale, salary and balance. The correct protection for a desktop application is the operating system's disk encryption:

1. **Turn on BitLocker** on the drive holding the app and its data (Windows: Settings -> Privacy & security -> Device encryption). Keep the recovery key off the PC.
2. **Encrypt your backup USB sticks** (BitLocker To Go). An unencrypted backup on a lost stick is as bad as a stolen PC.
3. Use **separate Windows accounts** for staff who should not reach the data folder.
4. **Never email or cloud-sync the database file.**
5. Give every person their own login. Use **Lock** when leaving the counter.

14. Troubleshooting and questions

What you see	What is happening and what to do
Every sale is refused	Fuel prices are still 0.00. Set them in Masters -> Fuel Prices.
A credit sale is refused	The customer has no credit account, or the sale would exceed the limit.
Attendant sees almost nothing	Correct - attendants only see their own shift and the sales terminal.
I cannot sell - 'not assigned'	You must be assigned to a nozzle in an open shift (Shifts -> Assign Nozzle).
Shift will not close	A nozzle assignment is still active. Complete it with a closing meter reading.
Nozzle cannot be deactivated	It is assigned in an open shift.
Account locked	5 wrong passwords. Wait 15 minutes or ask an administrator to unlock it.
Forgot my password	Use the login screen's forgot-password link with a code from an administrator, or ask the administrator to reset it.
A screen or button is missing	Your role does not have that permission. Ask your administrator.
Alerts shows no number at first	The count refreshes about once a minute; opening the screen recalculates it.
A total looks wrong	Do not re-enter anything. Tell your manager. Find the original record and use its correction action, or check the Audit Log.
Windows warns about the installer	Click More info -> Run anyway (the program is not signed with a paid certificate).
App will not start	See chapter 11 - read the log, then restore from a backup.

Getting more help

The **Support** link at the bottom of the sidebar shows version and support information. When you ask for help, say which screen you were on, what you clicked, and the exact message shown. The log file at %LOCALAPPDATA%\PetrolPumpERP\petrol_pump_erp.log helps whoever supports you.

Appendix A - Optional settings (config.env)

Most behaviour works out of the box. To change a setting, create or edit **config.env** in %LOCALAPPDATA%\PetrolPumpERP\ with lines like **SESSION_TIMEOUT_HOURS=12**. Changes apply the next time the app starts.

Setting	Default	What it controls
SESSION_TIMEOUT_HOURS	8	How long an idle session stays signed in
AUTO_BACKUP_INTERVAL_HOURS	24	How old the newest backup may be before the app takes another on startup
LOG_LEVEL	INFO	Log detail: DEBUG, INFO, WARNING or ERROR

Appendix B - Glossary

Term	Meaning
Audit log	Permanent record of who did what and when.
Backup	A complete copy of the database.
Dip reading	Measuring the fuel level in a tank with a dipstick.
GSTIN	The business's GST registration number, printed on receipts.
Meter reading	The totaliser number on a nozzle; closing minus opening = litres dispensed.
Opening / closing stock	Fuel in a tank at the start / end of a period.
Reconciliation	Comparing expected with counted cash, UPI, card or fuel.
Tender	A way of paying: cash, UPI, card, credit.
UPI	India's instant bank-payment system, used at the counter with a QR code or app.
Variance	The difference between expected and counted. Not an accusation.
Void / reverse / adjust	Correcting a record by adding a visible correcting entry, never deleting.
